Res. 29:580-585(1991).

1- FUNCTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBUNIT OF TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONVERS CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVITY.

1- DEVELOPMENTAL STAGE: EXPRESSED FROM MIDGESTATION TO ADULT LIFE.

1- SIMILARITY: BELONGS TO THE TROPONIN T FAMILY.

1- FUNCTION: TROPONIN T IS THE TROPOMYOSIN-BINDING SUBUNIT OF
TROPONIN, THE THIN FILAMENT REGULATORY COMPLEX WHICH CONFERS
CALCIUM-SENSITIVITY TO STRIATED MUSCLE ACTOMYOSIN ATPASE ACTIVITY.

1- ALTERNATIVE PRODUCTS: 2 ISOFORMS; EMBRYONIC/EA (SHOWN HERE) AND
A3B; ARE PRODUCED BY ALTERNATIVE SPLICING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              EMBL;

J. Mol. Biol. 213:399-405(1990).
-i- FUNCTION: Binds to actin filaments in muscle and nonmuscle cells. Plays a central role, in association with the troponin complex, in the calcium dependent regulation of vertebrate striated muscle contraction. Smooth muscle contraction is regulated by interaction with caldesmon. In nonmuscle cells is implicated in stabilizing cytoskeleton actin filaments.
-i- SUBUNIT: DIMER OF AN ALPHA AND A BETA CHAIN.
-i- DOMAIN: THE MOLECULE IS IN A COILED COIL STRUCTURE. THE SEQUENCE EXHIBITS A PROMINENT SEVEN RESIDUES DERIODICITY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LT 13

                                                                                                                                                                                                              The CDNA encoding the present sequence, which contains human soluble CD23 isoform B, can be used for the large scale recombinant production of soluble CD23.

The specification states that the nucleotide sequences contained in figures 4a-b, 5a-b, 12a-12b and 13a-b are claimed, however this numbering scheme does not relate to the scheme used in the relevant sections of the specification.

The DNA encoding the protein is obtd. from, eg human B cells, human malignant B or T cells, human monocytes or human eosinophilic cells. RRMI 8866 cells may also be cultured to produce the mRNA. The IgE binding factor and Fc epsilon receptor binds IgE and can be used to enhance the produc. If IgE from IgE producing cells. They can be used to treat allergies by eliminating excess blood IgE, and can also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EP254249-A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens
                                                                                                                                                                                 therapy.
```

```
The peptide is related to the IgE receptors on human B-cells and, if without the membrane anchoring sequence, to the IgE-BFs of Sarfati et al. Immunology 53, 197, 207, 783 (1984).

Amino acids between 1-133 starting from the N-terminal may be deleted. This is the membrane-anchoring sequence binding the polypeptide to the cytoplasmic membrane of the B-cells.

Alternatively amino acids between 110-130 or 250-321 may also be deleted. Alternatively amino acids between 110-130 or sequence such as pollens, e.g. as caused by antigens such as pollens,
                                            Sequence encoded by a gene for the water-soluble part of the human low affinity Fc-epsilon-receptor with the amino acids 150 to 321, comprising the EcoRI insert from pFc-epsilon-R-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 36; 48pp;

Wilh an N-terminal cytoplasmic domain, a C-terminal extracellular

Commain and a mol.wt. of about 46kd. Also claimed are recombinant DNA

Conty. the genetic information for the FCR, vectors conty. the DNA,

Conty. the genetic information for the FCR, vectors conty. The DNA,

Const organisms transformed with the vectors, oligonucleotides coding

for partial amino acid sequences from FCR, and processes for

preparing FCR. Preferred embodiments of the present invention are

preparing FCR. Preferred embodiments of the present invention are

preparing FCR. Preferred embodiments of the FC-epsilon-R

C part of the cDNA SQ coding for the AMS 1 to 148 of the FC-epsilon-R

C part of the cDNA SQ coding for the AMS 1 to 148 of the FC-epsilon-R

C signal SQ e.g.by the BSF-2 signal SQ (see pBSF-2-L8-AAN81517/P81176).

A suitable yeast expression vector is a plasmid conty. the yeast

ADHI-promoter, a gene coding for the yeast matting factor alpha

leader peptide (MF alpha leader SQ) a multicloning site and the

yeast ADHI-terminator (see AAN81514/P81173). See also EP-258492.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Whole human lymphocyte receptor for immunoglobulin (see corres AAN90344). Used to produce highly bloactive water-soluble FCR. Water-soluble FCR binds IgE, so it useful for treating hypersensitivity, esp. asthma. Amino acid residue 150 is a possible site for trypsin-like proteases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; AAN90344.

                                                                                                                                                                                                                                                                                                                                                  The sequence is of IgE-binding factor, secreted from the plasmid pSVG-BF. The plasmid pSVG-BF is a derivative of plasmid pSVG-ER which has the sequence coding amino acids 1-147 replaced with a coding region (AAQS5400) allowing secretion of the factor.
                                                                                                                                                                                                                                                                                                                                                                                                                    Recombinant DNA molecule - comprises enhancer and promoter unit
linked to transcriptive DNA segment and DNA segment comprising
promoter unit linked to DNA sub-segment

                        This protein is useful in the treatment of local or systemic IgE-allergic reactions and is obtd. by recombinant DNA methods. It is pref. un-accompanied by associated native glycosylation. Fragments it can also be used. See also AAN82253.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       production of soluble CD23

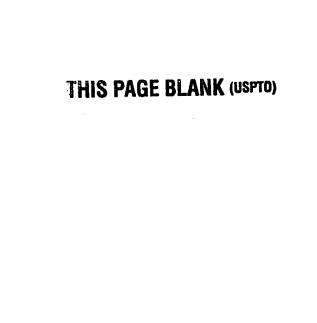

The specification states that the nucleotide sequences contained in figures 4a-b, 5a-b, 12a-12b and 13a-b are claimed, however this in figures 4a-b, one claimed to the scheme used in the relevant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The cDNA is obtained by reverse transcription of mRNA isolated from cells expressing IgB-binding activity, esp. human B-cells RPMI 8866. The peptide is related to the IgB receptors on human B-cells and, if without the membrane anchoring sequence, to the IgE-BFs of Sarfati et al. Immunology 53, 197, 207, 783 (1984).

Amino acids between 1-133 starting from the N-terminal may be deleted. This is the membrane-anchoring sequence binding the polypeptide to the Cytoplasmic membrane of the B-cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                      Alternatively amino acids between 110-130 or 250-321 may also be deleted. The peptide has IgE binding activity and is useful tor treating deleted conditions, e.g. as caused by antigens such as pollens,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            22-JUL-1986;

Sequence 3, Application US/09442099A
Patent No. 6465431
GENERAL INFORMATION:
APPLICANT: Thorn, R.
APPLICANT: Lanser, M.
APPLICANT: Wiederschain, D.
APPLICANT: Wiederschain, D.
TITLE OF INVENTION: PHARMACEUTICAL COMPOSITIONS COMPRISING TROPONIN SUBUNITS,
TITLE OF INVENTION: TRAGMENTS AND HOMOLOGS THEREOF AND METHODS OF THEIR USE TO
TITLE OF INVENTION: INHIBIT ANGIGENESIS
FILE REFERENCE: 8657-028
CURRENT APPLICATION NUMBER: US/09/442,099A
CURRENT FILING DATE: 1997-11-17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PRIOR APPLICATION DATA:
